Pasteurized Organic Fertilizer

All the Nutrition. None of the Negatives.

Low in salt and free of contaminants, compared to synthetic fertilizers or municipal sludge, **Perdue AgriRecycle** products are safe on seedlings. With balanced nutrient release characteristics, both products are ideal for feeding crops that require complete nutrition from “green-up” through maturity. Whatever you’re growing, the nutrients stay in the soil for continued, efficient uptake by your plants.

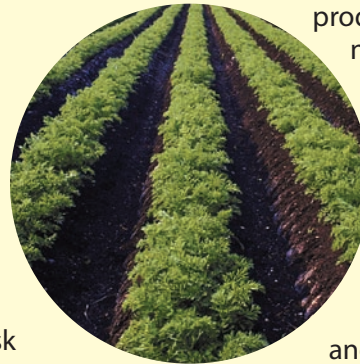

With so many concerns over product performance, safety, and the environment, you can’t afford to take chances with what you’re growing, from golf courses and sports fields to vegetables, field crops or nurseries. Trust **Perdue AgriRecycle’s** processed, all-natural, certified organic fertilizers, to meet all your goals...

- Superior performance – long term composting, strict production processes and quality inputs
- Encouraging soil microorganisms – providing an opportunity to reduce pesticide use
- Plant and environment safety – no risk of harm to plants, animals, people or your water source
- Cost-efficiency – compared to synthetic nutrient sources

Good for the Soil

MicroStart60 fertilizers improve soil structure, and water holding capacity over long term use. These precision products also help prevent nutrient leaching, and volatilization. Made of entirely recycled material (processed, pasteurized poultry litter), **MicroSTART60** and **MicroSTART60Plus** are pathogen free, and perfectly safe for people and animals.

More Than Just N-P-K

Listed by the Organic Materials Review Institute (OMRI), both **MicroSTART60** and **MicroSTART60Plus** satisfy all your plant nutrient requirements in a completely natural, slow release form that includes micro-nutrients such as calcium, magnesium and iron. Depend on either **Perdue AgriRecycle** formulation to deliver no-nonsense, guaranteed consistency with every application.

Plus

Greatest Return on Investment

U.S. Department of Agriculture officials suggest, “a synergistic effect between compost fertilizer and chemical fertilizer resulting in at least a 20% reduction in fertilizer requirements.” While initial cost may be slightly higher, Organic fertilizers are more efficiently used by the plant and yield greater results compared to synthetic fertilizers. Use of **Perdue AgriRecycle** products is consistent with Best Management Practice policies currently being formulated by State regulatory agencies and industry trade associations.

Carbon Is Key

MicroSTART60 is easily and efficiently broken down, providing a high quality carbon food source for microorganisms. This microbial activity generates by-products that can improve soil structure and reduce plant susceptibility to disease, fungus and insects. A 12:1 carbon-to-nitrogen ratio assures optimum, designed release of nutrients as needed to plants.

"I have used the MicroSTART60 product in our crop production system for the past 3 years. This fertilizer has provided excellent crop yields and predictable nutrient release. I have found that by integrating application of precise rates of the MicroSTART60, in combination with cover crops and compost application, that I can improve soil productivity and improve crop response, while not causing harm to the ecosystem."

— Christopher Worden, Ph.D.
Worden Farm

Higher Quality. Higher Yield.

In farming, greater yield is just the start with **Perdue AgriRecycle**. Field data shows yield increases in field crops with our all-organic fertilizers.

100% Organic. 100% Satisfaction.

Our certified all-natural **Perdue AgriRecycle** products are uniquely formulated to consistently outperform any chemical or other animal waste fertilizers.

Pure and Simple

Pasteurization eliminates weed seeds and any potential soil pathogen. **MicroSTART60** also carries a low salt index compared to chemical fertilizers, allowing more efficient use of water within the plants.

The Start of Something Big

Perdue AgriRecycle's pasteurized poultry products are guaranteed winners, no matter what your needs. To learn more, call today...and start playing it safe with 100% organic fertilizers that cover all your bases.

Mother Nature, With Nothing Artificial!

Some fertilizers claiming to be "organic" have been found to contain materials that are not approved. OMRI listed **MicroStart60®** and **MicroStart60Plus®** offer all the plant nutrients you need in a genuinely natural, slow release form that delivers simple, guaranteed consistency with every application. These products meet the requirements of the **National Organic Program (NOP)** for organic crop production and our restriction-free "processed manures" are listed by the **Organic Materials Review Institute (OMRI)**. Depend on either **MicroStart60** formulation to provide not only healthier, steadier growth but better soil quality as well.

Follow the Leader... For More Resources, Less Hassles!

The all-natural **MicroStart60** fertilizers are available directly from **Perdue AgriRecycle**. Enjoy the convenience and reliability of getting all the product you need when you need it — straight from a name you know and trust. Go with **MicroStart60**... and go natural with all the benefits and none of the restrictions.

Listed

Agronomic Benefits

- Slow nutrient release from natural microbial breakdown
- Trace nutrients including calcium for improved plant cell structure
- No foliar burn potential
- Inhibit soil pathogens through stimulation of soil microorganisms
- Improve soil structure over long term use
- Organic certification by national Organic Materials Review Institute (OMRI)
- Safe to apply around people and animals
- No chemical additives or contaminants
- Pasteurized, pathogen and weed seed free
- Can be safely applied near wells and water sources
- Supports thatch degradation and soil biological processes

microSTART60®

Pure and Natural Processed Poultry Manure

Average Nutrient Analysis

Nitrogen	3.00%
• Consists of H ₂ O Soluble Nitrogen and H ₂ O Insoluble Nitrogen	
Phosphorus	2.00%
Potassium	3.00%
Calcium	2.50%
Sulfur	0.76%
Magnesium	0.50%
Copper	0.07%
Zinc	0.07%
Manganese	0.07%
Iron	0.13%

Provides a controlled release form of Nitrogen and Potassium which improves the quality of all soil types
